

LAB 01

Using the techniques that you learned so far in this course, build two Vagrant machines as follows:

- Machine A: Install the Apache web server.
- Machine B: install the Lynx browser (text-only web browser, it can be installed using `apt-get install lynx`).

Machine B should be able to access the `index.html` page on Machine A using the Lynx browser. No other machines on the local network should be able to access Machine A or B only the host can.
